SparkAi Consortium

Solutions, Policy and Advancements in AI Research and Knowledge

OVERVIEW OF SPARK's 2025-2026 RESEARCH & EDUCATION PRIORITIES

Research and Development. Concept development and foundational research aimed at advancing understanding across three high-impact, AI-related domains: AI Governance, with a focus on anticipatory regulation and policy frameworks; AI Automation, involving the adaptation and substitution of human cognitive functions and occupational tasks; and AI Productivity, centered on evaluating AI's effects on individual, team, and organizational productivity metrics.

AI Laboratory Design, Experimentation and Testing. SPARK is establishing a controlled laboratory environment to design and evaluate metrics for the observability, interpretability, and transparency of AI modelling methodologies and training datasets. The initiative will place particular emphasis on semantic data engineering and its application across diverse AI applications.

AI Strategy Education and Public Engagement: A key priority in 2026 is to develop educational programs of three types: senior, general management briefings that address the integration of business and technical strategy and implementation; second, briefings that address related technology curves that affect the rate of AI adoption and diffusion, including IT infrastructure modernization, energy systems, and quantum; and third, civic and public sector educational initiatives that affect broader civic trust and confidence in AI innovation.

LIST OF 2025 SPARK WORKING PAPERS

Vol 1 No 1: Is AI Governable? Industry Perspectives on the Adoption, Effectiveness and Accountability of Frontier AI
James Short

Vol 1 No 2: Meeting Agentic AI's Data Quality Needs with Zero Trust Data Quality
James Massa and James Short

Vol 1 No 3: Project Chainwatch: A User Configurable Anomaly Detection System for Monitoring Blockchain Network Data Flows
Samson Qian, Steve Orrin, Matt Clanton and James Short

Vol 1 No 4: Scientifically Automating Data Quality Decisions with AI Explainability Weights
James Massa and James Short

Vol 1 No 5: Building Intelligent Foundations: Rethinking Storage Strategy in the Age of AI
James Short

Vol 1 No 6: Revolutionizing Drug Discovery with AI-Driven Semantic Data Engineering
Joe Lancaster, Murali Krishnam, Raju Puspati and James Short
